VLS welcomes new member

Date: February 22, 2018

VLS, the Verification of Lubricant Specifications, has welcomed Otto Lube as a new Associate member.

Otto Lube is a fast-growing company based in the UK with its parent company GIL (Golden International Lubricants) based in the UAE. Its range of Otto Lube lubricants is formulated with a virgin base oil blend.

Verification of Lubrication Specifications is an independent organisation providing a credible and trusted means to verify lubricant specifications. The lubricant industry initiative works to bring transparency to the lubricant market place and protect and educate the end user.

Mossa Jassim from Otto Lube said: “As modern engines have become more technologically advanced, superior oil quality is essential to sufficiently lubricate crucial engine parts during high-pressure combustion across wider temperature ranges. Our research demonstrates that constant use of poor quality oil will continually cause irreversible damage to internal engine parts and cost more fuel in the long run. We are delighted to be joining VLS and to be part of this industry leading initiative to promote the importance of lubricant quality and performance specifications within the UK lubricant market.”

David Wright, Company Secretary at VLS added: “We are pleased to continue to welcome new members to our organisation. This demonstrates our increasing influence in the market and supports our vital role to protect lubricant manufacturers, distributors, mechanics and motorists alike.”
